Built-in Features

Designed for Precast Operations

DesignSync

Provides real-time sync with your CAD design software for every project element, ensuring seamless collaboration with live updates to track project progress and removing manual entry errors.

Visual Production & Maintenance Planning

Revolutionize your precast manufacturing operations with our comprehensive Planning module, specifically tailored to optimize equipment downtime, Table/Bed Planning, Production Capacity Planning, and Maintenance scheduling.

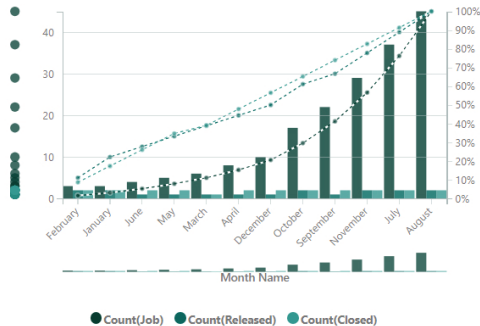

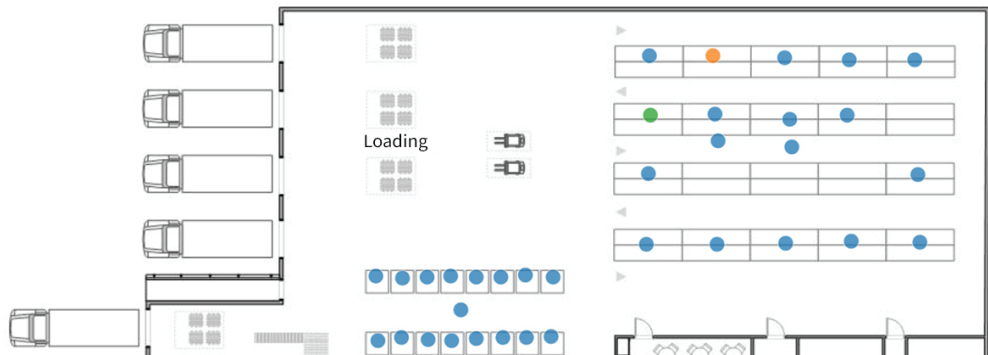

Inventory Management & Purchasing

Unlock real-time insights into subcontractor relationships, gain visibility into inventory at your fingertips, exercise precise cost control measures, and monitor supplier performance seamlessly. Elevate decision-making with data-driven precision through our embedded purchasing and inventory management modules.

Embedded Accounting & Finance

Take control of your financial operations and gain a rapid single view of your financial activities; reduce costs, improve cash flow, master budget planning and automate your billing process.

Streamline Project Estimation and Capacity Planning before committing to new projects by leveraging predefined templates that automate the estimation process.

Seamless integration with your CAD software, enable bidirectional integration with design applications, upload element information, view element status, and track interactions between design, production, and site within a comprehensive Element Master view.

Maximize revenue by monitoring project variations, minimize billing queries with accurate project billing, reduce costs through real-time earned value tracking, streamline project administration, enhance customer satisfaction with real-time project updates and mitigate losses with prompt corrective actions.

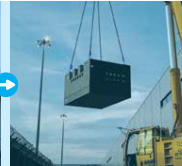

Leverage our robust tools for real-time production capacity planning. Set up, track and view production schedules to efficiently handle job releases, receive alerts and track multiple stages with automated material issue, ensuring efficient allocation of resources and timely project completion.

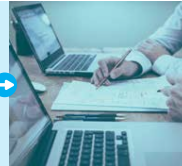

Efficiently manage raw materials, WIP, and finished product inventories with real-time monitoring and updates. Stay ahead with shortage alerts, conduct reorder analysis, track stock status, and streamline costing management—all in one comprehensive solution.

Elevate accuracy in picking with our real-time load monitoring and streamlined ticket generation. Stay informed about production through robust real-time monitoring. Collaborate seamlessly with integrated dispatch and scheduling for optimized logistics and enhanced resource efficiency.

Embedded site management provides optimized resource allocation, logistics coordination and accurate installation sequencing delivering real-time project visibility and effective project cost control.

Our embedded accounting module ensures real-time financial data, facilitating informed decision-making by streamlining processes, enhancing cost management, and improved operational efficiency, while also providing accurate reporting and efficient forecasting based on integrated financial and production data.

NET ZERO SUSTAINABILITY

index

Ready to take your precast manufacturing business to the next level? Index can help you get crystal-clear on where your business is right now and where it needs to go next. Our innovative precast solutions, powered by cognitive ERP, are designed to help you supercharge efficiency, turn your data into action, and stand out from the competition.

Imagine a system that seamlessly integrates every facet of your production processes, optimizing resource utilization and minimizing waste. With real-time data analytics and predictive modeling, our Precast ERP empowers you to make informed decisions that not only drive profitability but also foster environmental responsibility. From raw material procurement to the final product delivery, our ERP for the Precast Vertical ensures every step is eco-conscious.
